Table 1: **Modality gap under different caption completeness levels on DOCCI.** The gap is measured by the Euclidean distance between image and text centroids in the original 512-dimensional embedding space. Lower is better.

Model	**Modality Gap ↓**		
	Full	**Random 50%**	**Random 10%**
Long-CLIP	1.0490	1.0395	1.0131
Sema-CLIP (Global)	0.7784	0.7704	0.9094
Sema-CLIP (Masked)	**0.6864**	**0.7267**	**0.9039**

Note. Random 50% and Random 10% use the mean over five random seeds under the `random_distributed` strategy. Full uses the historical fixed-sample result.
